Recommended Native Plant Nurseries List
Georgia Native Plant Initiative
State Botanical Garden of Georgia

http://botgarden.uga.edu/conservation-science/georgia-native-plant-initiative/

We list these nurseries to help home gardeners, land managers, and garden designers find ethical sources of plant species native to Georgia. None of the companies nor organizations below have provided us with any financial or other benefits in order to be listed here. We offer this resource as a public service, serving Georgia citizens as their State Botanical Garden. We work to keep this list updated. If you have information to share, write to jeska@uga.edu.

Baker Environmental Nursery
http://www.bakerenvironmentalnursery.com/
949 Marshall Clark Rd, Hoschton, GA 30548
Phone: 706-654-9072, Fax: 706-658-2347
Email: sales@bakerenvironmentalnursery.com

AND our recommendations for Georgia seeds and Prairie Resources:

1. Roundstone does have Georgia seeds of Georgia species but this stock can sell out quickly. Check for Georgia provenance versus species appropriate for Georgia if seed sourcing is important for your project. (Provenance means the seeds came from Georgia populations, not that they are just seeds of species that are native to Georgia.)  
Roundstone Native Seed (Upton, KY)  http://www.roundstoneseed.com/
2. **Prairie Moon** and **Ernst** nurseries have wonderful resources on their websites, creating prairies, mowing techniques, planting for pollinators. Check out Prairie Moon for informative blogs, newsletters, videos, and planting kits.  
**Prairie Moon Nursery (Winona, MN)** [https://www.prairiemoon.com/](https://www.prairiemoon.com/)  

3. **Rock Spring Restoration IS a Georgia company**, and they have Georgia seeds! Walter Bland is also an expert on restoration and working with Georgia soils. Walter has experience restoring in our Georgia clay soils and eroded cotton lands. **Walter Bland-Rock Spring Restorations** [http://rockspringrestorations.com/](http://rockspringrestorations.com/)

4. **SBG is selling seeds!** Our seeds are all Georgia provenance. Stocks are limited. We sell seeds to gardeners through our SBG Garden Gift Shop. We also provide seeds free to growers as supplies last to help build the commercial production of Georgia natives from Georgia sourced seeds. Contact **jceska@uga.edu** on behalf of Heather Alley and the Mimsie Lanier Center.
Connect to Protect – CToP in Georgia:
http://botgarden.uga.edu/conservation-science/connect-to-protect/

Connect to Protect is a public outreach, educational program providing native plants to all gardeners and schools. This program launched in Athens a couple of years ago and is now sending connections across Georgia. Our vision is to take this program, its message, and the appropriate plants, to all of Georgia with plants not only specific to each immediate region, but with plants grown from seeds local to that region.

The goal of CToP is to help incorporate natives into every garden, from patio pots to mailbox gardens, to pocket prairies in urban yards, and raised beds in school gardens. We provide Georgia-sourced seeds of these natives, and select plants that are pretty for gardens and also support pollinators in all of their life stages through all seasons. We donate plants to schools and sell them to others as well. CToP gardens can be in raised beds, in pots, in ground, or even in old fields, roadsides, or rights-of-way.

Connect to Protect connects the dots for wildlife by providing food, shelter, and breeding locations for Georgia wildlife. Specifically, insect pollinators, most of whom require native plants to complete their life cycles and songbirds who feed their nestlings insects found on these Georgia native plants. Each Connect to Protect garden also incorporates Asclepias species specific to their physiographic province for supporting migrating Monarchs.

We have all of the parts in place to take Connect to Protect statewide. We have the horticulture knowledge, we have the Georgia seeds, we have the plants in production, we have interpretation, signage, and children’s programing. We know what native bee and butterfly species we want to help support; we know garden clubs ready to help provide garden monitoring expertise to the furthest borders of Georgia. We can help home-gardeners, schools, coffee shops, public libraries, and land managers create native plant gardens that are proven to help support Georgia wildlife. Let us help you Connect to Protect!

We envision a Georgia where
• native plants are incorporated regularly into urban and suburban gardens;
• roadsides, farm field borders, food plots, and powerline rights-of-way featuring native grasses and wildflowers are a standard practice;
• prairies and floodplains are managed for invasive species and restored with best native plant management practices by corporations and government agencies;
• pollinator gardens are abundant and support the full life cycle of pollinator species;
• and where no imperiled plant species goes extinct.
