**Hummingbird Trail**

**The Hummingbird Trail** was researched and designed by Judy Royal Glenn as she photographed the ruby-throated hummingbird at the State Botanical Garden of Georgia. Ruby-throated hummingbirds migrate and can be found in Georgia from March through October.

### **Trail Markers**

Look for the red markers (shown below) around the garden to possibly see a hummingbird at that location. Red signs mark places frequented by hummingbirds throughout the garden. Some markers indicate flowers that provide the birds with nectar. Others indicate trees where hummingbirds perch.

### **Viewing Tips**

- Wait at a site for 10-15 minutes. Females may be nesting, so views may be less frequent.
- Carefully scan the area to see if they are perching on plants or trees.
- Be still, so you don't scare the birds away.
- Keep a keen eye while walking through the garden. Hummingbirds are small and easy to miss.
